MANUALE D'INSTALLAZIONE
INSTALLATION AND USER MANUAL

AVVERTENZE GENERALI

L'installazione deve essere eseguita esclusivamente da personale qualificato. Prima di procedere con l'installazione verificare l'integrità del prodotto e la completezza dei componenti. Leggere attentamente il presente manuale prima di iniziare l'installazione. Verificare che le predisposizioni idrauliche siano conformi alle specifiche tecniche del prodotto. Il produttore non è responsabile per danni derivanti da installazioni non corrette o non conformi alle istruzioni.Prima del collegamento finale effettuare il lavaggio delle tubazioni per evitare residui nell'impianto.

GENERAL WARNINGS

Installation must be carried out only by qualified personnel. Before proceeding with the installation check that the product is not damaged and that all components are included Carefully read this manual before starting the installation.Ensure that the hydraulic system complies with the product technical specifications. Shut off the water supply before carrying out any installation work.The manufacturer is not responsible for damage caused by incorrect installation or failure to follow these instructions. Before the final connection flush the water pipes to remove any debris from the system.

IT PULIZIA E MANUTENZIONE

Verificare che la pressione dell'acqua sia compresa tra 2 e 5 bar.
Se la pressione supera 5 bar installare un riduttore di pressione.
Verificare che le connessioni acqua calda e fredda siano correttamente predisposte.
Verificare che le tubazioni siano state lavate prima del collegamento del prodotto.
Verificare che la portata dell'impianto sia adeguata al prodotto installato.
Si consiglia l'installazione di valvole di intercettazione a monte dell'impianto.
Pulire periodicamente soffioni e rubinetteria; in presenza di acqua dura (°f) effettuare manutenzione più frequente ed è altamente consigliata l'installazione di un addolcitore dell'acqua; non utilizzare prodotti corrosivi o abrasivi, pulire solo con acqua e aceto di vino bianco.

EN CLEANING AND MAINTENANCE

Ensure that water pressure is between 2 and 5 bar.
If pressure exceeds 5 bar a pressure reducer must be installed.
Check that hot and cold water connections are correctly prepared.
Ensure that the pipes have been flushed before connecting the product.
Check that the water flow rate is suitable for the installed product.
The installation of shut off valves upstream of the system is recommended.
Clean shower heads and faucets periodically; in case of hard water (°f) more frequent maintenance is recommended and the installation of a water softener is highly recommended; do not use corrosive or abrasive products, clean only with water and white wine vinegar.

Disegno tecnico / Technical drawing

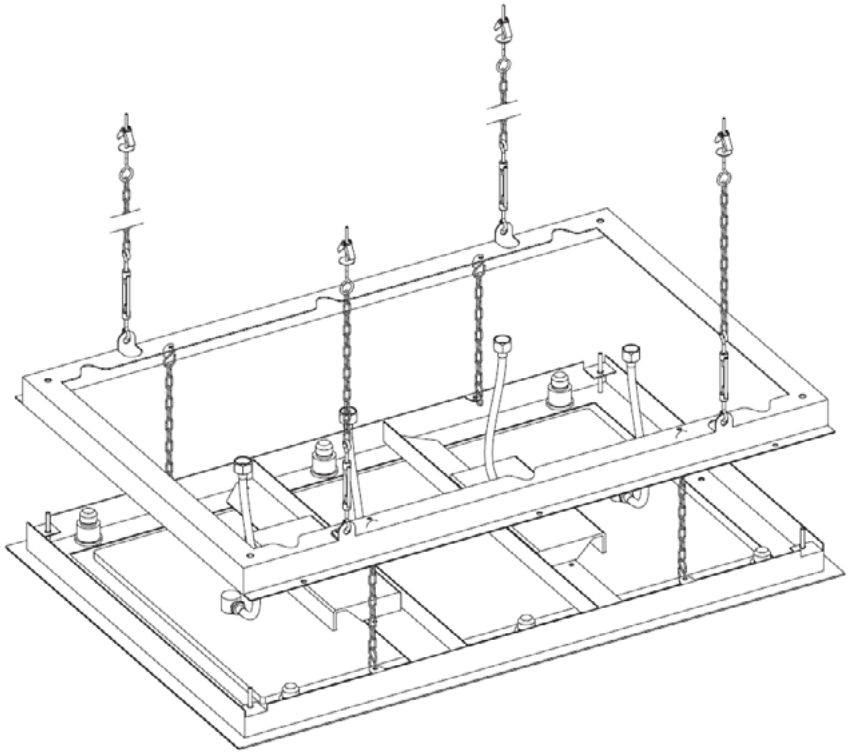

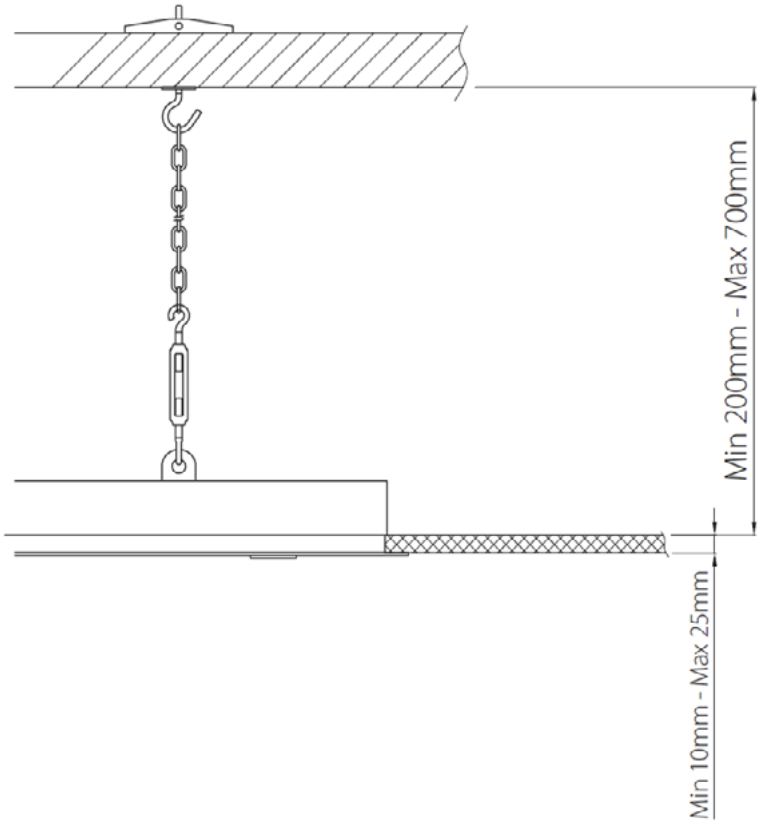

- soffione 420×420 mm da incasso
- 3 tipi di getto (pioggia, nebulizzato, cascata)
- cromoterapia con 4 Led RGB a 16 colori
- sistema di fissaggio
- attacchi da ½ “

- Built-in overhead shower 420×420 mm
- 3 water-patterns (rain, nebuliser, waterfall)
- 4 LED RGB 16-colour chromotherapy
- fixing system
- ½ “ connections
