HOT WATER THERMO TEC MIXER

Miscelatore termostatico

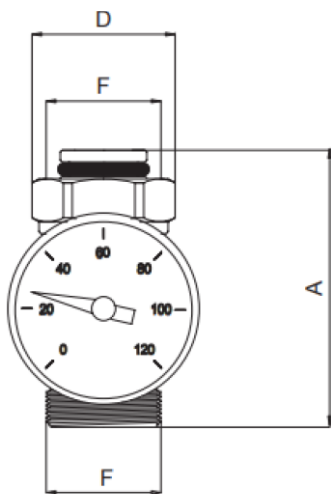

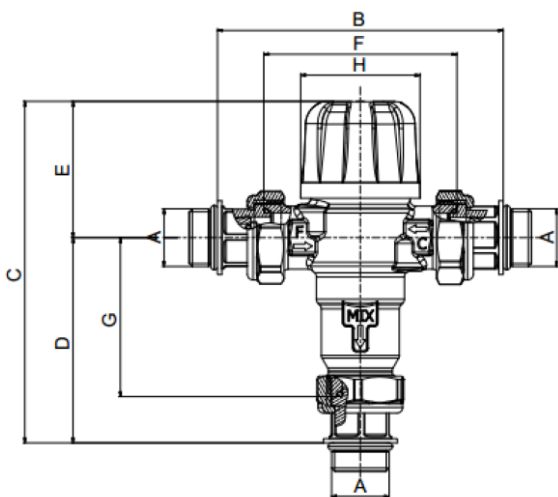

A131

Thermostatic mixer

Il miscelatore termostatico mantiene costante la temperatura dell'acqua, compensando variazioni di pressione o temperatura agli ingressi, ed è fondamentale negli impianti di distribuzione di acqua calda sanitaria per prevenire scottature. Si utilizza anche in docce emozionali, cammini Kneipp, tunnel emozionali e Vichy shower per getti d'acqua caldi, superiori ai 36°C.

The thermostatic mixer keeps the water temperature constant, compensating for pressure or temperature variations at the inlets, and is essential in hot water distribution systems to prevent scalding. It is also used in experience showers, Kneipp paths, emotional tunnels, and Vichy showers for hot water jets above 36°C.

Materiale / Material	Ottone / Brass
OUTPUT TEMPERATURE RANGE	36°C-50°C
Pressione consigliata / Recommended pressure	3 bar
Attacchi idrici / Water inlets	1/2" - 3/4"
